

**Amendments to the Specification**

Please replace the paragraph on page 7 that begins with "Thereafter, whenever it is needed to remove" with the following amended paragraph:

Thereafter, whenever it is needed to remove the circuit board 10 from the enclosure 20, the technical personnel or user simply needs to use his/her thumb to press on the rear-end press-on portion 213 of the elongated elastic portion 210 on the handle-equipped locking member 200 and then use his/her index or middle finger to pull against the handle portion 220 of the handle-equipped locking member 200. This action will cause the hook portion 212 of the handle-equipped locking member 200 to be released from the locking hole 321, thus allowing the modularized circuit board 10 to be withdrawable from the enclosure 20 by pulling the ring-shaped handle portion 220 ~~of the ring-shaped handle portion 220~~.
